DATE MAILED: 03/15/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/840,193

Applicant(s)

KAWANO, TSUTOMU

Examiner

Patrick L. Edwards

Art Unit

2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 2-9 and 33-35 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 2-9 and 33-35 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

Art Unit: 2621

### **DETAILED ACTION**

1. The response received on 02-13-2006 has been placed in the file and was considered by the examiner. An action on the merits follows.

#### ***Response to Arguments***

2. The arguments filed on 02-13-2006 have been fully considered. A response to these arguments is provided below.

### **Prior Art Rejections**

#### **Summary of Argument:**

Applicant has amended independent claim 33 by adding some examples of types of body parts to the preamble. Applicant alleges that since Armato II does not disclose these types of body parts, the reference no longer reads on the claims

#### **Examiner's Response:**

The examiner disagrees. The amendment does not further limit the scope of the claim. It simply gives an example of different body parts that could be distinguished, but this is not a required limitation. (see, generally, MPEP 2173.05(d))

Not only does this amendment fail to overcome the previous rejection, it also creates other problems such as problems of indefiniteness that will be addressed under statutes such as 35 USC 112(2), or the like.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 2-9, and 33-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding independent claim 33, the language "such as a chest, an abdomen, and a leg" is indefinite. This sort of exemplary language—when used in the claims—leads to confusion over the intended scope of the claim.

The remaining claims are rejected because they either directly refer to this indefinite claim language, or because the indefiteness of the independent claims trickles down and affects all the dependent claims.

Art Unit: 2621

*Claim Rejections - 35 USC § 102*

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 2-5, 33, are rejected under 35 U.S.C. 102(e) as being anticipated by Armato, III et al. (USPN 6,335,980).

Regarding claim 33, Armato discloses the following limitations:

**An object region extracting section that receives a set of two-dimensionally-arranged radiation image data including radiation image data of the radiographed body part and extracts an object region formed by the radiation image data of the radiographed body part from the set of two-dimensionally-arranged radiation image data.**

The entire Armato disclosure is concerned with receiving a two-dimensional radiation image data and extracting an object region therefrom. For example, several of the Figures in Armato show a two-dimensional radiation image (see armato col. 3 lines 13-14) and further show that an object has been extracted from that received image.

**a contour recognizing section having classification criteria data for each of the plurality of different contour types, which recognizes a contour of the extracted object region, and determines to which one of the plurality of different contour types the recognized contour belongs based on the classification criteria data.**

Armato discloses classification criteria which is used to assign the extracted object region to a number of categories (i.e. contour types). This is shown at col. 5 lines 39-64, and a table of categories is shown in Figure 6 of Armato.

Regarding claim 2, Armato discloses the following limitations:

**The radiation image processing apparatus according to claim 33 wherein, the contour recognizing section judges the kind of recognized contour based on a position change of a boundary of the object region** (e.g., at Armato col. 7 lines 12-20: The reference describes judging the kind of recognized contour (in this case it is a decision between sternum and diaphragm) by seeing whether the boundary of the object region is concave (i.e. checking for a position change).).

Regarding claim 3, Armato discloses the following limitations:

**a region boundary point detecting section that detects a boundary of the object region.**

The Armato reference is directed to detecting a boundary of either the initial lung region contour or the ROI's

Art Unit: 2621

**a position change amount calculating section that calculates a position change amount of the boundary of the object region from plural region boundary points detected by the region boundary point detecting section** (see e.g. Armato col. 7 lines 46-64: The reference describes calculating x and y position amounts. As was stated before, these position amounts are used to determine the category that a ROI belonged to (see Armato col. 7 lines 12-20).

**a contour specifying section that specifies the kind of recognized contour from the position change amount calculated by the position change amount calculating section** (see e.g. Armato col. 7 lines 46-64: The reference describes calculating x and y position amounts. As was stated before, these position amounts are used to determine the category that a ROI belonged to (see Armato col. 7 lines 12-20).

Regarding claim 4, Armato discloses the following limitations:

**the radiation image processing apparatus according to claim 3, wherein the position change amount is a distance between neighboring region boundary points**

(see e.g. Armato col. 7 lines 47-53: The reference describes comparing x and y coordinates of each boundary point with x and y coordinates of neighboring boundary points.

Regarding claim 5, Armato discloses the following limitations:

**the radiation image processing apparatus according to claim 3, wherein the position change amount is an amount of change in coordinates between neighboring region boundary points in one or both of the horizontal and vertical directions.**

(see the above discussion with respect to claim 4. The cited passage also meets the limitations of claim 5 because we are comparing an amount of change in both the horizontal and vertical directions.

Regarding claim 34, Armato discloses the following limitation:

**the radiation image processing apparatus of claim 33, wherein the contour recognizing section provides a feature amount to the recognized contour in accordance with the determined one of the plurality of different contour types**

Regarding claim 8, Armato discloses the following limitations:

**the radiation image processing apparatus according to claim 33, wherein the body part of the object is recognized by using the feature amount obtained in the contour recognizing section**

Art Unit: 2621

(see e.g. Figure 6 of Armato and corresponding discussion throughout the disclosure. The “feature amount” can be met by any of a number of identifiers shown in this figure, including category number, ROI size, or threshold value.).

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armato et al. as applied to claim 33 above, and further in view of Yasui et al. (USPN 6,493,458 B2). The arguments as to the relevance of Armato as applied in claim 1 above are incorporated herein.

With regard to claims 6 and 7, Armato discloses a radiation image processing apparatus with a contour recognizing means.

Armato also discloses a region boundary point detecting means that detects a boundary of the object region (see the above discussion under 102).

Armato fails to expressly disclose that the contour recognizing means uses local region widths of the object region. Yasui, however, discloses a contour recognizing means (Yasui col. 8 line 4) which uses local region widths of the object region (Yasui col. 22 lines 26-33 with Figure 29).

Yasui further discloses a contour specifying means that specifies the kind of recognized contour from the region widths calculated by the region width calculating means (Yasui col. 22 lines 26-33 with Figure 29). It would have been obvious to one reasonably skilled in the art at the time of the invention to modify Armato's contour recognizing means by determining the borders of the object region (and hence the contour) by calculating the width of each region on every scanning line as taught by Yasui. Such a modification would have allowed for an accurate, reliable method of determining the boundary (i.e. contour) of a localized object region (Yasui col. 2 line 61 – col. 3 line 10).

9. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Armato as applied to claim 33 above, and further in view of Shinbata (USPN 6,594,380 B2). The arguments as to the relevance of Armato as applied to claim 1 above are incorporated herein.

With regard to claim 9, The Armato reference is insufficient to meet the limitations, because it fails to disclose a radiographing orientation judging means. Shinbata, however, discloses a radiographing orientation judging means for judging a radiographic orientation for an object from the contour based on the feature amount (Shinbata col. 5

Art Unit: 2621

lines 31-59: The Shinbata reference discloses determining the radiographic posture (which is analogous to the radiographic orientation recited in the claim) of an object based on the profile (i.e. contour) of a portion of the image. The radiographic posture is determined based on a feature amount.

It would have been obvious to one reasonably skilled in the art at the time of the invention to modify Armato's radiation image processing apparatus by determining the radiographic orientation of extracted objects as taught by Shinbata. Such a modification would have allowed for a system that could automatically detect the posture (orientation) of the subject, and would no longer require this information to be input manually (Shinbata col. 1 lines 39-41). This would have made for a faster system that also avoided unnecessary input errors.

#### *Conclusion*

10. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

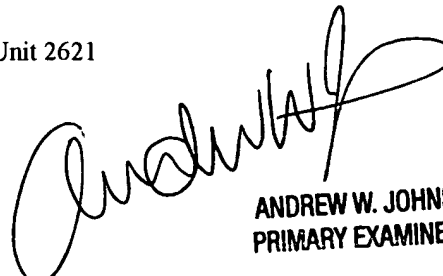

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick L Edwards whose telephone number is (571) 272-7390. The examiner can normally be reached on 8:30am - 5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joe Mancuso can be reached on (571) 272-7695. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
